16000 Crawler Exchange - Repair/Return Program

Large wind farm projects require extensive crane travel, and that means extensive maintenance of crane crawler components to keep cranes running safely and efficiently. Manitowoc EnCORE is pleased to announce two new programs to fit your wind work needs.

The Manitowoc 16000 is the work horse of the wind farm industry, and any crane down time has a direct impact on your customer's bottom line. EnCORE is pleased to announce that we now have a 16000 Crawler Exchange Program to shorten the turnaround time on rebuilding 16000 crawlers and will provide design enhancements that will improve the component life of your 16000 crawlers. This upgrade includes larger intermediate rollers at both ends of the crawler, and an improved upper roller system. These improvements will extend the time between rebuilds of your customers 16000 crawlers and are included in the crawler component exchange program.

For your other Manitowoc crawlers, we now have available a Repair/Return Program for all Manitowoc models. These crawlers can be rebuilt back to original Manitowoc specifications using original Manitowoc components and our highly trained EnCORE technicians to provide extended service life for your crawlers. Rebuilt crawler frames to replace your old tired out components are also available on some models. If your project timeframe allows, we can also Repair/Return your 16000 crawlers and provide the same design improvements we are offering on our crawler exchange program to improve your customer's crawler component life.

Time is money and you need to maximize your customer's crawler component life, especially when performing wind work. Contact EnCORE today at 501-557-5800 to discuss how we can help you Exchange or Repair/Return your Manitowoc crawlers to maximize component life. If more convenient, send an email to EnCORE@manitowoc.com for additional information on this exciting program.
