

ATD Grease for fish joints

This product is complying with a strict Manitowoc specifications sheet ensuring a controlled wear of fish joints by pins.

Grease:

- Specially designed in order to increase the lifetime of the mast assembling by pins.
- Making fitting and dismantling of the pins easier.
- To be used at each assembly.
- Contains additives developed in order to protect the surfaces of the assembled parts, even under high pressure.

T-61032-05
Can 1 kg

Advantages:

- Protects against corrosion and fretting corrosion.
- Waterproof and adapted to off shore locations.
- Protection of the material, slowing down the ovalization of the borings and the wearing away of the material.
- Very strong adhesive force on the metallic surfaces, ensuring long conservation of the protecting and lubricating film.
- Excellent thermal stability : can be used from -25°C to + 50°C and can be stored from -40°C to + 60°.

Ensure the safety and the operation of your crane for a long time
